VI. Calculation Method of Ex-dividend Stock Price

The total amount of the Company's cash dividends = the total capital stock actually participated in the distribution plan × the distribution ratio, that is, CNY2,439,504,228.21 = 805,116,907 shares × CNY 3.03 per share considering that shares held by the Company's special stock repurchase account do not participate in the profit distribution plan for 2022 fiscal year. After the implementation of this profit distribution plan, the total capital stock of the Company remains unchanged, and the ratio of the total cash dividends allocated to each share will be a little bit reduced according to the principle that the market value of stock remains unchanged. Therefore,

when calculating the ex-dividend stock price after the implementation of this profit distribution plan, the cash dividend per share should be calculated at CNY3.0237374 per share. (Cash dividend per share = total cash dividends / total capital stock, that is, CNY3.0237374 per share = CNY2,439,504,228.21 ÷ 806,784,407 shares). On the premise that the profit distribution plan remains unchanged, the ex-dividend stock price after the implementation of the profit distribution plan for 2022 fiscal year shall be implemented in accordance with above principles and calculation methods, that is, the ex-dividend stock price after the implementation = closing stock price on the equity registration date -CNY3.0237374 per share.
